We support the tasks in the public sector

Dialogue with citizens and the business community

Citizens and businesses are entitled to accessible and focused public-sector services engaging in a digital dialogue, which allows relevant tasks to be transferred from the authorities to citizens. EG creates value through its tools and platforms for secure self-service solutions and cooperation with citizens and businesses.

Administration and case handling

Clear overviews, efficient work processes and the knowledge needed to be able to take action supported by data are required for the public sector to deliver the right services to the individual citizen. EG develops useful and modern solutions for the public administration of children, young people, adults and the elderly geared to the future and user needs.

Public services

A prerequisite for the public sector being able to provide the right help and support is knowing which initiatives work. EG works with the public sector on effective initiatives - on the basis of considerable domain knowledge and respect for the municipal regulatory framework.

Internal operations and administration

The internal operations and administration of the public sector as a workplace must be supported by effective tools and instruments. EG develops digital solutions and services that support and streamline the individual employee's working day, while ensuring coherence across the public administration.

Public utilities

An efficient and well-run utilities industry is one of the foundation stones of the public sector's work to create smart cities based on data-driven insights. EG delivers stable and future-proof IT solutions for the utilities market based on industry knowledge and 30 years of experience, and helps utilities to stand out in a market characterised by intensifying competition with the help of customer-focused solutions.

Contact us

EG delivers innovative IT solutions to the public sector based on broad capabilities within public administration, extensive practical knowledge and the latest digital expertise combined with vast experience. Get answers to your questions before you make a decision.
