

CLEANING MANAGEMENT

- Efficient and precise cleaning planning

EG MainManager's cleaning module is a powerful tool that helps those responsible for cleaning with the optimization of cleaning tasks.

INSTA 800 Quality standard

Our Cleaning module is based on the INSTA 800 quality standard, and it gives you the opportunity to:

- Warehouse cleaning models that determine the cleaning frequency and normal time for cleaning certain room types
- Connect cleaning models to rooms and customize cleaning instructions as needed
- Warehouse cleaning zones with the help of interactive drawings, which make planning more manageable
- Manage cleaning team and create performance profiles pre-evaluation
- Manage cleaning schedules through tasks and work orders

Our system is able to calculate the necessary time for cleaning each individual room, and collects this in a report. This makes it easier to plan, organize and optimize the cleaning work.

Makes it easy to plan cleaning and quality follow-up

- Interactive drawings
- INSTA800 Quality standard
- Series risk graphic
- Calculation of costs and working time
- Effective follow-up of cleaning contracts
- Quality control and random sampling
- Checklists via app and tablet
