

Faster, easier management of packaging across your entire value chain

EG Packaging Management Advantages:

- Save time and resources with professional packaging management.
- Register and track the quantity, value and location of packaging materials.
- Get insight into packaging stock levels, movements, invoicing, purchase and disposal.
- Have visibility across your customers, vendors and carriers.
- Simplify processes and agreements with packaging pool providers.
- Fast and reliable registration of packaging shipments with mobile, hand-held devices.
- Avoid time-consuming and error-prone manual entry processes.

Packaging materials often have an intrinsic value for your business or for your business partners. As such, it is important to be able to register and track the quantity, value and location of these materials within your own company and across your value chain of customers, vendors, carriers and packaging pool owners.

This can be a time consuming and error-prone manual process that can reduce the efficiency of your warehouse and logistics operations, and affect your professional relations with your business partners.

Integrate packaging management into your daily processes

EG Packaging Management works seamlessly with Microsoft Dynamics 365 for Finance and Operations to enable faster, easier tracking, invoicing and disposal of incoming, on-hand and outgoing packaging materials.

The solution extends standard Inventory Module capabilities, and allows you to treat packaging as products, with or without an associated financial value. In this way, your packaging stock levels, movements, invoicing, purchase and disposal can all be tracked as an integrated part of your financial and logistics processes.

Simplify handling of standard packaging types

With EG Packaging Management, you can define specific shipping, receiving, tracking and invoicing processes that are associated with handling of common packaging types such as return packaging, invoiceable packaging, disposable packaging and pool packaging.

Gold
Microsoft Partner

You can also define packaging groups for single or multiple items, based on whether the packaging shipment is related to domestic or foreign shipments, and define the packaging composition for these groups for individual sites and warehouses – for example, defining the number of items per box, boxes per cradle, and cradles per pallet for a packaging group.

Define flexible packaging frameworks for customers and vendors

By defining packaging frameworks you can see the balance of packaging for each customer or vendor, and create invoices or credit notes based on the balance and location of returnable packaging. When you create a sales- or purchase-order, the related packaging information is automatically included, and the packaging quantities for that order are calculated and displayed.

Speed processes with your shipping carriers

With EG Packaging Management, you can set up site and warehouse information for shipping carriers with a unique 'Mode of delivery' that combines details around the shipping carrier and the services they offer. When creating a sales- or purchase-order, the shipping carrier information is automatically transferred to the order based on the mode of delivery selected for the order and carrier in question.

Fast, reliable registration of shipments with mobile integration

You can use the solution with mobile (RF) devices to register details of the packaging type and quantity in inbound and outbound shipments, based on a sales- or purchasing-order, or the customer, vendor or carrier reference number. You can also add additional notes such as the registration number of the delivery vehicle.

EG and Dynamics 365 – all you need from one experienced partner

EG is one of Scandinavia's leading Dynamics 365 partners. With a strong ERP and CRM foundation, and deep IT capabilities, we offer expert help on everything from hardware, infrastructure, hosting, support and service to management and process consultancy. Our experienced consultants can help you find solutions that address current challenges and enable future plans.

IT solutions that enhance your business and match your industry

EG is one of Scandinavia's leading Microsoft Dynamics 365 partners. We supply IT solutions that deliver business value for both small and large organizations. Our more than 1900 employees use their knowledge and industry insight to enable productivity improvements for our customers in Denmark, Norway, Sweden and Greenland.

EG EG Packaging Management Features:

- Built for Microsoft Dynamics 365 for Finance and Operations.
- Seamless integration with your financial, warehouse and logistics processes.
- Define specific processes for handling return packaging, invoiceable packaging, disposable packaging and pool packaging.
- Define packaging settings for domestic or foreign shipments.
- Define packaging composition for individual sites and warehouses.
- Use separate number sequences for tracking packaging details with customers and vendors.
- Use with mobile (RF) devices with integration to the Dynamics Mobile Warehouse Application.
